# Equipment & Services

## Capacitor Discharge Stud Welders

Capacitor discharge welding is ideal for applications with a weld range from 14 gauge to 3/8" stud diameter. Certain studs can be welded to material as thin as .015. Capacitor discharge welders achieve full penetration welds in milliseconds. Electrical contractors find CD welding an excellent solution for the application of grounding studs, mounting conduit boxes and other attachments to steel. **Units are lightweight, portable and operate on standard 110 voltage.**

## Service, Repair & Rentals

In addition to a complete inventory of parts and accessories, we have the know-how to repair your stud welder. Repairs can be performed at your

location, on the jobsite or at our facility, whichever fits your needs. Rental equipment is available to limit your downtime while your repairs are being completed. On-site emergency repair service with back up equipment can also be provided.

## Vendor Managed Inventory

With over 100,000 sq. ft. of space and 18,000,000 parts in stock, we are positioned to effectively manage your fastener inventories. Bar coding, custom labelling, forecasting and more. From the beginning of the supply chain to the end or somewhere in between, we can help!
